

Customer Churn Analysis and Prediction

Project Report

Introduction

This project analyzes customer data and predicts customer churn using Machine Learning.

Objective

To identify customers likely to leave a service and support retention strategies.

Dataset

Features: CustomerID, Gender, Tenure, MonthlyCharges, Contract, and Churn.

Tools Used

Python, Google Colab, Pandas, Matplotlib, Seaborn, Scikit-Learn, and Power BI.

Methodology

Data loading, visualization, preprocessing, train-test split, Logistic Regression, evaluation.

Results

Model performance was evaluated using accuracy score and confusion matrix.

Conclusion

The model can help identify customers who are likely to churn.
